NOTES. All 1994 data are national estimates derived from samples representing the 565 largest research-performing U.S. universities and colleges; all previous years' data (1988, 1990, 1992) represent 525 institutions.

Because of rounding, components may not add to totals. In the biological and medical sciences, the total number of institutions is less than the sum of the subcategories because medical schools that are part of larger universities counted twice.
